VISVESVARAYA TECHNOLOGICAL UNIVERSITY

"JnanaSangama", Belgaum -590014, Karnataka.

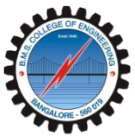
LAB REPORT
on

BIG DATA ANALYTICS

Submitted by

Ishan Bhandari (1BM19CS198)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING



B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
May-2022 to July-2022

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "LAB COURSE **BIG DATA ANALYTICS " carried** out by **Ishan Bhandari (1BM19CS198),** who is a bonafide student of **B. M. S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of a **Big Data Analytics - (20CS6PEBDA)** work prescribed for the said degree.

Dr. Pallavi G.B
Assistant Professor
Department of CSE
BMSCE, Bengaluru

Dr. Jyothi S Nayak
Professor and Head
Department of CSE
BMSCE, Bengaluru

Index Sheet

Course Outcome

CO1	Apply the concept of NoSQL, Hadoop or Spark for a given task
CO2	Analyze the Big Data and obtain insight using data analytics mechanisms.
CO3	Design and implement Big data applications by applying NoSQL, Hadoop or Spark

PROGRAM 1

Perform the following DB operations using Cassandra.

1. Create a keyspace by name Employee

2. Create a column family by name

Employee-Info with attributes

Emp_Id Primary Key, Emp_Name,

Designation, Date_of_Joining, Salary, Dept_Name

3. Insert the values into the table in batch

4. Update Employee name and Department of Emp-Id 121

5. Sort the details of Employee records based on salary

6. Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee.

7. Update the altered table to add project names.

8.Create a TTL of 15 seconds to display the values of Employees.

```
cqlsh:employee> CREATE KEYSPACE employee WITH REPLICATION={ 'class' :
'SimpleStrategy',

'replication_factor' : 1};

cqlsh:employee> USE employee;

cqlsh:employee> create table employee_info(emp_id int PRIMARY KEY, emp_name text,

 ... designation text, date_of_joining timestamp, salary double PRIMARY KEY, dept_name text);

cqlsh:employee> CREATE TABLE employee_info(emp_id int, emp_name text, designation text,
date_of_joining

timestamp, salary double, dept_name text, PRIMARY KEY(emp_id, salary));

cqlsh:employee> BEGIN BATCH INSERT INTO

 ... employee_info(emp_id,emp_name,designation,date_of_joining,salary,dept_name)

 ... VALUES(100,'John','MANAGER','2021-09-11',30000,'TESTING');

 ... INSERT INTO

 ... employee_info(emp_id,emp_name,designation,date_of_joining,salary,dept_name)

 ... VALUES(111,'Tom','ASSOCIATE','2021-06-22',25000,'DEVELOPING');
```

```
 ... INSERT INTO
 ... employee_info(emp_id,emp_name,designation,date_of_joining,salary,dept_name)
 ... VALUES(121,'Elsa','MANAGER','2021-03-30',35000,'HR');
 ... INSERT INTO
 ... employee_info(emp_id,emp_name,designation,date_of_joining,salary,dept_name)
 ... VALUES(115,'Chris','ASSISTANT','2021-12-30',20000,'DEVELOPING');
 ... INSERT INTO

PROGRAM 2

Perform the following DB operations using Cassandra.

1.Create a keyspace by name Library

2. Create a column family by name Library-Info with attributes

Stud_Id Primary Key, Counter_value of type Counter,

Stud_Name, Book-Name, Book-Id, Date_of_issue

3. Insert the values into the table in batch

4. Display the details of the table created and increase the value of the counter

5. Write a query to show that a student with id 112 has taken a book "BDA" 2 times.

6. Export the created column to a csv file

7. Import a given csv dataset from local file system into Cassandra column family

cqlsh:library> CREATE KEYSPACE library WITH replication = {'class': 'SimpleStrategy','replication_factor':1};

cqlsh:library> USE library ;

cqlsh:library> CREATE TABLE Library_info(stud_id int, stud_name text, book_name text, book_id text,

date_of_issue timestamp, counter_value counter, PRIMARY KEY(stud_id,stud_name, book_name, book_id,

date_of_issue));

cqlsh:library> BEGIN COUNTER BATCH

... UPDATE library_info set counter_value +=1 where stud_id = 111 and stud_name = 'Manoj' and

book_name = 'Operations Research' and book_id = '56TXT' and date_of_issue = '2021-09-12';

... UPDATE library_info set counter_value +=1 where stud_id = 112 and stud_name = 'Kamal' and

book_name = 'Engineering Mathematics-3' and book_id = '5ERW4' and date_of_issue = '2021-04-10';

... UPDATE library_info set counter_value +=1 where stud_id = 113 and stud_name = 'Mahesh' and

book_name = 'Robinson Crusoe' and book_id = '34EDC' and date_of_issue = '2021-02-01';

... UPDATE library_info set counter_value +=1 where stud_id = 114 and stud_name = 'Raj' and

PROGRAM 3

MongoDB CREATE DATABASE IN MONGODB.

> use myDB

switched to db myDB

db;

myDB

show dbs;

admin 0.000GB

config 0.000GB

local 0.000GB

II. CRUD (CREATE, READ, UPDATE, DELETE) OPERATIONS

1. To create a collection by the name "Student". Let us take a look at the collection list prior to the creation of the new collection "Student".

db.createCollection("Student"); => sql equivalent

CREATE TABLE STUDENT(…);

{ "ok" : 1 }

2.To drop a collection by the name "Student".

db.Student.drop();

3.Create a collection by the name

"Students" and store the following data in it.

db.Student.insert({_id:1,StudName:"MichelleJacintha",Gra

de:"VII",Hobbies:"InternetSurfing"});

WriteResult({ "nInserted" : 1 })

4.Insert the document for "AryanDavid" in to the Students

collection only if it does not already exist in the collection.

However, if it is already present in the collection, then update the

document with new values. (Update his Hobbies from "Skating" to

“Chess”.) Use “Update else insert” (if there is an existing document, it will attempt to update it, if there is no existing document then it will insert it).

```
db.Student.update({_id:3,StudName:"AryanDavid",Grad
e:" VII"},{$set:{Hobbies:"Skating"}},{upsert:true});
WriteResult({ "nMatched" : 0, "nUpserted" : 1, "nModified"
: 0, "_id" : 3 })
```

5.FIND METHOD

A. To search for documents from the “Students” collection based on certain search criteria.

```
db.Student.find({StudName:"AryanDavid"});
({cond..},{columns.. column:1, columnname:0} )
{ "_id" : 3, "Grade" : "VII", "StudName" : "AryanDavid",
"Hobbies" : "Skating" }
```

B. To display only the StudName and Grade from all the documents of the Students collection. The identifier_id should be suppressed and NOT displayed.

```
db.Student.find({},{StudName:1,Grade:1,_id:0});
{ "StudName" : "MichelleJacintha", "Grade" : "VII" }
{ "Grade" : "VII", "StudName" : "AryanDavid" }
```

C. To find those documents where the Grade is set to ‘VII’

```
db.Student.find({Grade:{$eq:'VII'}}).pretty();
{
"_id" : 1,
"StudName" : "MichelleJacintha",
"Grade" : "VII",
"Hobbies" : "InternetSurfing"
}
```

{

"_id" : 3,

"Grade" : "VII",

"StudName" : "AryanDavid",

"Hobbies" : "Skating"

}

D. To find those documents from the Students collection where the Hobbies is set to either 'Chess' or is set to 'Skating'.

db.Student.find({Hobbies :{ $in: ['Chess','Skating']}}).pretty

();

{

"_id" : 3,

"Grade" : "VII",

"StudName" : "AryanDavid",

"Hobbies" : "Skating"

}

E. To find documents from the Students collection where the StudName begins with "M".

db.Student.find({StudName:/^M/}).pretty();

{

"_id" : 1,

"StudName" : "MichelleJacintha",

"Grade" : "VII",

"Hobbies" : "InternetSurfing"

}

F. To find documents from the Students collection where the StudNamehas an "e" in any position.

db.Student.find({StudName:/e/}).pretty();

{

"_id" : 1,

"StudName" : "MichelleJacintha",

"Grade" : "VII",

"Hobbies" : "InternetSurfing"

}

G. To find the number of documents in the Students collection.

db.Student.count();

2

H. To sort the documents from the Students collection in the descending order of StudName.

db.Student.find().sort({StudName:-1}).pretty();

{

"_id" : 1,

"StudName" : "MichelleJacintha",

"Grade" : "VII",

"Hobbies" : "InternetSurfing"

}

{

"_id" : 3,

"Grade" : "VII",

"StudName" : "AryanDavid",

"Hobbies" : "Skating"

}

III. Import data from a CSV file

Given a CSV file “sample.txt” in the D:drive, import the file into the MongoDB collection, “SampleJSON”. The collection is in the database “test”.

mongoimport --db Student --collection airlines --type csv –

headerline --file /home/hduser/Desktop/airline.csv

IV. Export data to a CSV file

mongoexport --host localhost --db Student --collection

airlines --csv --out /home/hduser/Desktop/output.txt –

fields “Year”

,

”Quarter”

V. Save Method :.

db.Student.save({StudName:”Vamsi”, Grade:”VI”})

WriteResult({ "nInserted" : 1 })

VI. Add a new field to existing Document:

db.Student.update({_id:ObjectId("625695cc7d129fb98b44c8a1")},

{$set:{Location:"Network"}})

WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })

VII. Remove the field in an existing Document

db.Student.update({_id:ObjectId("625695cc7d129fb98b44c8a1

")},

{$unset:{Location:”Network”}})

WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })

VIII. Finding Document based on search criteria suppressing few fields

db.Student.find({_id:1},{StudName:1,Grade:1,_id:0});

{ "StudName" : "MichelleJacintha", "Grade" : "VII" }

To find those documents where the Grade is not set to ‘VII’

db.Student.find({Grade:{$ne:'VII'}}).pretty();

{

"_id" : ObjectId("625695cc7d129fb98b44c8a1"),

"StudName" : "Vamsi",

"Grade" : "VI"

}

To find documents from the Students collection where the

StudName ends with s.

db.Student.find({StudName:/s$/}).pretty();

{

"_id" : 1,

"StudName" : "MichelleJacintha",

"Grade" : "VII",

"Hobbies" : "InternetSurfing"

}

IX. to set a particular field value to NULL

db.Student.update({_id:3},{$set:{Location:null}})

WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })

X. Count the number of documents in Student Collections

db.Student.count()

3

XI. Count the number of documents in Student Collections

with grade :VII

db.Student.count({Grade:”VII”})

2 retrieve first 3 documents

db.Student.find({Grade:”VII”}).limit(1).pretty();

{

"_id" : 1,

"StudName" : "MichelleJacintha",

"Grade" : "VII",

"Hobbies" : "InternetSurfing"

}

Sort the document in Ascending order

db.Student.find().sort({StudName:1}).pretty();

{

"_id" : 3,

"Grade" : "VII",

"StudName" : "AryanDavid",

"Hobbies" : "Skating",

"Location" : null

}

{

"_id" : 1,

"StudName" : "MichelleJacintha",

"Grade" : "VII",

"Hobbies" : "InternetSurfing"

}

{

"_id" : ObjectId("625695cc7d129fb98b44c8a1"),

"StudName" : "Vamsi",

"Grade" : "VI"

}

Note: for desending order :

db.Students.find().sort({StudName:-

1}).pretty();

To Skip the 1st two documents from the Students Collections

db.Student.find().skip(2).pretty()

{

"_id" : ObjectId("625695cc7d129fb98b44c8a1"),

"StudName" : "Vamsi",

"Grade" : "VI"

}

XII. Create a collection by name “food” and add to each document add a “fruits” array

db.food.insert({ _id:1, fruits:['grapes','mango','apple'] })

db.food.insert({ _id:2, fruits:['grapes','mango','cherry'] })

db.food.insert({ _id:3, fruits:['banana','mango'] })

{ "_id" : 1, "fruits" : ["grapes", "mango", "apple"] }

{ "_id" : 2, "fruits" : ["grapes", "mango", "cherry"] }

{ "_id" : 3, "fruits" : ["banana", "mango"] }

To find those documents from the “food” collection which has the “fruits array” consists of “grapes” ,“mango” and “apple”.

db.food.find ({fruits: ['grapes','mango','apple'] }). pretty();

{ "_id" : 1, "fruits" : ["grapes", "mango", "apple"] }

To find in “fruits” array having “mango” in the first index

position.

db.food.find ({“fruits.1":grapes'})

To find those documents from the “food” collection where the size of the array is two.

db.food.find ({“fruits”: {$size:2}})

{ "_id" : 3, "fruits" : ["banana", "mango"] }

To find the document with a particular id and display the first two elements from the array “fruits”

db.food.find({_id:1},{“fruits”:{$slice:2}})

{ "_id" : 1, "fruits" : ["grapes", "mango"] }

To find all the documets from the food collection which have elements mango and grapes in the array “fruits”

db.food.find({fruits:{$all:[“mango”,”grapes”]}})

{ "_id" : 1, "fruits" : ["grapes", "mango", "apple"] }

{ "_id" : 2, "fruits" : ["grapes", "mango", "cherry"] }

Update on Array: using particular id replace the element present in the 1st index position of the fruits array with apple

db.food.update({_id:3},{$set:{'fruits.1':'apple'}})

WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })

Insert new key value pairs in the fruits array

db.food.update({_id:2},{$push:{price:{grapes:80,mango:200,cherr

y:100}}})

{ "_id" : 1, "fruits" : ["grapes", "mango", "apple"] }

{ "_id" : 2, "fruits" : ["grapes", "mango", "cherry"], "price" : [{

"grapes" : 80, "mango" : 200, "cherry" : 100 }] }

{ "_id" : 3, "fruits" : ["banana", "apple"] }

PROGRAM 6

From the following link extract the weather data

https://github.com/tomwhite/hadoop-book/tree/master/input/ncdc/all

Create a Map Reduce program to

a) find average temperature for each year from NCDC data set.

\\AVERAGE DRIVER

```
package temp;
import org.apache.hadoop.fs.Path;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Job;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
public class AverageDriver {
public static void main(String[] args) throws Exception {
if (args.length != 2) {

System.err.println('Please Enter the input and output parameters");
System.exit(-1);
}
Job job = new Job();
job.setJarByClass(AverageDriver.class);
job.setJobName("Max temperature");
FileInputFormat.addInputPath(job, new Path(args[0]));
FileOutputFormat.setOutputPath(job, new Path(args[1]));
job.setMapperClass(AverageMapper.class);
job.setReducerClass(AverageReducer.class);
job.setOutputKeyClass(Text.class);
```

```
job.setOutputValueClass(IntWritable.class);
System.exit(job.waitForCompletion(true) ? 0 : 1);
}
}
```

\\AVERAGE MAPPER

```
package temp;
import java.io.IOException;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.LongWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Mapper;
public class AverageMapper extends Mapper<LongWritable, Text, Text, IntWritable> {
public static final int MISSING = 9999;
public void map(LongWritable key, Text value, Mapper<LongWritable, Text, Text,
IntWritable>.Context context) throws IOException, InterruptedException {
int temperature;
String line = value.toString();
String year = line.substring(15, 19);
if (line.charAt(87) == '+') {
temperature = Integer.parseInt(line.substring(88, 92));
} else {
temperature = Integer.parseInt(line.substring(87, 92));
}
String quality = line.substring(92, 93);
if (temperature != 9999 && quality.matches("[01459]"))
context.write(new Text(year), new IntWritable(temperature));
}
```

```
}
```

\\AVERAGE REDUCER

```
package temp;
import java.io.IOException;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Reducer;
public class AverageReducer extends Reducer<Text, IntWritable, Text, IntWritable> {
public void reduce(Text key, Iterable<IntWritable> values, Reducer<Text, IntWritable,
Text, IntWritable>.Context context) throws IOException, InterruptedException {
int max_temp = 0;
int count = 0;
for (IntWritable value : values) {
max_temp += value.get();
count++;

}
context.write(key, new IntWritable(max_temp / count));
}
}
```

```
c:\hadoop_new\sbin>hdfs dfs -cat /tempAverageOutput/part-r-00000
1901    46
1949    94
1950    3
```

b) find the mean max temperature for every month

\\MEAN MAX DRIVER

```
package meanmax;
```

```
import org.apache.hadoop.fs.Path;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Job;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;

import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
public class MeanMaxDriver {
public static void main(String[] args) throws Exception {
if (args.length != 2) {
System.err.println("Please Enter the input and output parameters");
System.exit(-1);
}
Job job = new Job();
job.setJarByClass(MeanMaxDriver.class);
job.setJobName("Max temperature");
FileInputFormat.addInputPath(job, new Path(args[0]));
FileOutputFormat.setOutputPath(job, new Path(args[1]));
job.setMapperClass(MeanMaxMapper.class);
job.setReducerClass(MeanMaxReducer.class);
job.setOutputKeyClass(Text.class);
job.setOutputValueClass(IntWritable.class);
System.exit(job.waitForCompletion(true) ? 0 : 1);
}
}

\\MEAN MAX MAPPER
package meanmax;
```

```
import java.io.IOException;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.LongWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Mapper;
public class MeanMaxMapper extends Mapper<LongWritable, Text, Text, IntWritable> {
public static final int MISSING = 9999;
public void map(LongWritable key, Text value, Mapper<LongWritable, Text, Text,
IntWritable>.Context context) throws IOException, InterruptedException {
int temperature;
String line = value.toString();
String month = line.substring(19, 21);
if (line.charAt(87) == '+') {
temperature = Integer.parseInt(line.substring(88, 92));
} else {
temperature = Integer.parseInt(line.substring(87, 92));
}
String quality = line.substring(92, 93);
if (temperature != 9999 && quality.matches("[01459]"))
context.write(new Text(month), new IntWritable(temperature));
}
}
```

\\MEAN MAX REDUCER

```
package meanmax;
import java.io.IOException;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
```

```
import org.apache.hadoop.mapreduce.Reducer;
public class MeanMaxReducer extends Reducer<Text, IntWritable, Text, IntWritable> {
public void reduce(Text key, Iterable<IntWritable> values, Reducer<Text, IntWritable,
Text, IntWritable>.Context context) throws IOException, InterruptedException {
int max_temp = 0;
int total_temp = 0;
int count = 0;

int days = 0;
for (IntWritable value : values) {
int temp = value.get();
if (temp > max_temp)
max_temp = temp;
count++;
if (count == 3) {
total_temp += max_temp;
max_temp = 0;
count = 0;
days++;
}
}
context.write(key, new IntWritable(total_temp / days));
}
}
```

```
c:\hadoop_new\sbin>hdfs dfs -cat /tempMaxOutput/part-r-00000
01      44
02      17
03      111
04      194
05      256
06      278
07      317
08      283
09      211
10      156
11      89
12      117
```

PROGRAM 7

For a given Text file, Create a Map Reduce program to sort the content in an alphabetic order listing only top 10 maximum occurrences of words.

\\TOPN

```
package samples.topn;
import java.io.IOException;
import java.util.StringTokenizer;
import org.apache.hadoop.conf.Configuration;
import org.apache.hadoop.fs.Path;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Job;
import org.apache.hadoop.mapreduce.Mapper;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
import org.apache.hadoop.util.GenericOptionsParser;
public class TopN {
public static void main(String[] args) throws Exception {
Configuration conf = new Configuration();
String[] otherArgs = (new GenericOptionsParser(conf, args)).getRemainingArgs();
if (otherArgs.length != 2) {
System.err.println("Usage: TopN <in> <out>");
System.exit(2);
}
Job job = Job.getInstance(conf);
job.setJobName("Top N");
job.setJarByClass(TopN.class);
job.setMapperClass(TopNMapper.class);
```

```
job.setReducerClass(TopNReducer.class);
job.setOutputKeyClass(Text.class);
job.setOutputValueClass(IntWritable.class);
FileInputFormat.addInputPath(job, new Path(otherArgs[0]));
FileOutputFormat.setOutputPath(job, new Path(otherArgs[1]));
System.exit(job.waitForCompletion(true) ? 0 : 1);
}

\\TOPN COMBINER
package samples.topn;
import java.io.IOException;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Reducer;
public class TopNCombiner extends Reducer<Text, IntWritable, Text, IntWritable> {
public void reduce(Text key, Iterable<IntWritable> values, Reducer<Text, IntWritable,
Text, IntWritable>.Context context) throws IOException, InterruptedException {
int sum = 0;
for (IntWritable val : values)
sum += val.get();
context.write(key, new IntWritable(sum));
}
}

\\TOPN MAPPER
package samples.topn;
import java.io.IOException;
import java.util.StringTokenizer;
```

```
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Mapper;
public class TopNMapper extends Mapper<Object, Text, Text, IntWritable> {
private static final IntWritable one = new IntWritable(1);
private Text word = new Text();
private String tokens = "[_|$#<>\\^=\\[\\]\\*/\\\\,;,.\\-:()?!\"']";
public void map(Object key, Text value, Mapper<Object, Text, Text, IntWritable>.Context
context) throws IOException, InterruptedException {
String cleanLine = value.toString().toLowerCase().replaceAll(this.tokens, " ");
StringTokenizer itr = new StringTokenizer(cleanLine);
while (itr.hasMoreTokens()) {
this.word.set(itr.nextToken().trim());
context.write(this.word, one);
}
}
}

\\TOPN REDUCER

PROGRAM 9

Program to print word count on scala shell and print “Hello world” on scala IDE

```
val data=sc.textFile("sparkdata.txt")
data.collect;
val splitdata = data.flatMap(line => line.split(" "));
splitdata.collect;
val mapdata = splitdata.map(word => (word,1));
mapdata.collect;
val reducedata = mapdata.reduceByKey(_+_);
reducedata.collect;
```

```
package hellooWorld

object hello {

  def main (args: Array[String]) {

    println("Hello World")

  }

}
```

PROGRAM 10

Using RDD and FlaMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark

```
val textFile = sc.textFile("/home/bhoom/Desktop/wc.txt")

val counts = textFile.flatMap(line => line.split(" ")).map(word => (word, 1)).reduceByKey(_ + _)

import scala.collection.immutable.ListMap

val sorted=ListMap(counts.collect.sortWith(_._2 > _._2):_*)// sort in descending order based on values

println(sorted)

for((k,v)<-sorted)

{

if(v>4)

{

print(k+",")

print(v)

println()

}

}
```

```
